Lambda Grammar

Ksenchik Nikita

May 28, 2023

1 Grammar 1

```
 < program > ::= let < variable > = < term > | < term > < < term > ::= < appliqueSeq > | < term' > < < term' > ::= < variable > | < abstraction > | "(" < term > ")" < < appliqueSeq > ::= < term' > < term' > | < term' > | < abstraction > ::= \ < variable > | < variable > | < term > < < < variable > ::= < keyword - exception > | < letter > | < digit > | < letter > ::= a | ... | z | A | ... | Z < digit > ::= 1 | ... | 9
```

2 Grammar 2

```
 < program > ::= let < variable > = < term > | < term > < < term > ::= < applique > | < term' > < < term' > ::= < variable > | < abstraction > | "(" < term > ")" < < applique > ::= < term > < term' > < abstraction > ::= \ < variable > \ < variable > \}. < term > < < variable > ::= < keyword - exception > | < letter > \ < letter > | < digit > \} < keyword - exception > ::= let < letter > ::= a | ... | z | A | ... | Z < digit > ::= 1 | ... | 9
```

3 Examlpe 1, Gr. 1

```
letK = \langle x \ y.x \implies
< program >
let \ < variable > \ = \ < term >
let < letter > \{ < letter > \mid < digit > \} = < term >
let K \{ \langle letter \rangle \mid \langle digit \rangle \} = \langle term \rangle
let K = < term >
let K = \langle term' \rangle
let K = \langle abstraction \rangle
let K = \langle variable \rangle \{\langle variable \rangle\}. \langle term \rangle
let K = \langle elter \rangle \{ \langle elter \rangle | \langle digit \rangle \} \{ \langle variable \rangle \}. \langle elter \rangle \}
let K = \langle eletter \rangle \{ \langle variable \rangle \}. \langle term \rangle
let K = \langle x \{ \langle variable \rangle \}. \langle term \rangle
let K = \langle x < variable \rangle \{ \langle variable \rangle \}. \langle term \rangle
let K = \langle x < letter \rangle  { < letter \rangle  | < digit \rangle} { < variable \rangle}. < term \rangle
let K = \langle x y \{ < letter > | < digit > \} \{ < variable > \} \}. \langle term > |
let K = \langle x y \{ \langle variable \rangle \}. \langle term \rangle
let K = \langle x y. < term \rangle
let K = \langle x y. < term' \rangle
```

```
\begin{array}{lll} let \ K &= \ \backslash x \ y. < variable > \\ let \ K &= \ \backslash x \ y. < letter > \ \{ < letter > \ | \ < digit > \} \\ let \ K &= \ \backslash x \ y.x \ \{ < letter > \ | \ < digit > \} \\ let \ K &= \ \backslash x \ y.x \end{array}
```

4 Example 2, Gr 1

```
let \ gg = (\label{eq:let} \ lo.l) \ e \ z \implies
< program >
let < letter > \{ < letter > | < digit > \} = < term >
let g \{ \langle letter \rangle \mid \langle digit \rangle \} = \langle term \rangle
let g < letter > \{ < letter > | < digit > \} = < term >
let gg \{ \langle letter \rangle \mid \langle digit \rangle \} = \langle term \rangle
let gg = \langle term \rangle
let gg = \langle applique \rangle
let gg = \langle term' \rangle \langle term' \rangle \{\langle term' \rangle\}
let \ gg \ = \ (< term >) \ < term' > \ \{< term' >\}
let gg = (\langle term' \rangle) \langle term' \rangle \{\langle term' \rangle\}
let gg = (\langle abstraction \rangle) \langle term' \rangle \{\langle term' \rangle\}
let gg = (\ < variable > \{ < variable > \}, < term >) < term' > \{ < term' > \}
let gg = (\ < letter > \ | < digit > \} \{< variable > \}. < term >) < term' > \} 
term' > 
let gg = (\{letter > let digit >\} \{ \langle variable >\}, \langle term \rangle) \langle term' >\} \{ \langle term' >\} \}
let gg = (\langle l \{\langle variable \rangle\}, \langle term \rangle) \langle term' \rangle \{\langle term' \rangle\}
let gg = (\langle l < variable \rangle) < term \rangle) < term' \rangle \{\langle term' \rangle\}
term' > 
let gg = (\lower black o \{< letter > \ | \ < variable > \} \{< variable > \}, < term >) < term' > \}
let gg = (\langle lo \{\langle variable \rangle\}, \langle term \rangle) \langle term' \rangle \{\langle term' \rangle\}
let gg = (\langle lo. \langle term \rangle) \langle term' \rangle \{\langle term' \rangle\}
let gg = (\langle lo. \langle term' \rangle) \langle term' \rangle \{\langle term' \rangle\}
let gg = (\langle l o. \langle variable \rangle) \langle term' \rangle \{\langle term' \rangle\}
let gg = (\langle lo. < letter > \{ < letter > | < digit > \}) < term' > \{ < term' > \}
let gg = (\langle lo.l \{ \langle letter \rangle \mid \langle digit \rangle \}) \langle term' \rangle \{ \langle term' \rangle \}
let gg = (\label{eq:gg} let gg = (\label{eq:gg} let o.l) < term' > \{ < term' > \}
let gg = (\langle l \ o.l) \ \langle letter \rangle \ \{\langle letter \rangle \ | \ \langle digit \rangle\} \ \{\langle term' \rangle\}
let gg = (\l o.l) e \{ < letter > | < digit > \} \{ < term' > \}
let gg = (\l o.l) e \{\langle term' \rangle\}
let gg = (\label{eq:let_gg} (\label{eq:let_gg} \label{eq:let_gg} let gg = (\label{eq:let_gg} \label{eq:let_gg} \label{eq:let_gg} \label{eq:let_gg} | e + (\label{eq:let_gg} \label{eq:gg} \label{eq:gg} | e + (\label{eq:let_gg} \label{eq:gg} \label{eq:gg} \label{eq:gg} | e + (\label{eq:gg} \label{eq:gg} \label{eq:gg} \label{eq:gg} \label{eq:gg} | e + (\label{eq:gg} \label{eq:gg} \label{eq:gg} \label{eq:gg} \label{eq:gg} \label{eq:gg} \label{eq:gg} | e + (\label{eq:gg} \label{eq:gg} \label{
let gg = (\lower let o.l) e < variable > \{ < term' > \}
let gg = (\lower letter > \{ < letter | < digit > \} \{ < term' > \}
let gg = (\label{eq:letter} | et gg = (\label{eq:letter} | et git >) {< term' >}
let gg = (\langle l o.l \rangle) e z \{\langle term' \rangle\}
let gg = (\label{eq:gg} let o.l) e z
```
